

GREENSBORO STARTUP WEEK · 2026

EntitleFlow

**Cut redline chaos.
Ship the resubmittal clean.**

Drop a reviewer redline PDF. Get a structured, assignable comment list in under two minutes. Track the response until the resubmittal ships.

Founder: Jene · **Event:** Greensboro Startup Week 2026 · **Format:** panel + floor

The one-line pitch

Say this first, always.

“EntitleFlow turns reviewer redline PDFs into a clean, assigned comment list in under two minutes — so AEC teams stop transcribing markups and start shipping resubmittals.”

The 3-minute panel pitch

Hook · 15 sec

“Every architecture firm in America has the same broken workflow. They submit a permit, the city sends back a PDF full of red marks, and then someone on that team spends three hours retyping reviewer comments into a spreadsheet before anyone can actually start responding. I’m building the fix.”

Problem · 45 sec

After a permit is submitted, reviewer comments come back as a marked-up PDF. Today, those comments live in five places at once — email threads, Bluebeam markups, somebody’s Excel, Slack DMs, and tribal memory. A mid-sized firm is tracking 75 to 250 open comments across their active projects at any given time, and there is no shared system of record.

That’s why permit expeditor firms in Raleigh and Charlotte charge \$25 to \$40 an hour — because firms are literally paying humans full-time salaries to solve this coordination problem. That’s the market I’m going after.

Solution · 60 sec

EntitleFlow does two things.

One · Drop the PDF.

You drop the redline PDF into our tool, and in under two minutes you get a structured, assignable comment list. No transcription, no retyping, no missed comments. That's the magic moment.

Two · Track the response.

Once those comments are structured, you assign them to your team, track the response status, and compile the resubmittal package without chasing email threads. That's the operating layer.

“The parse is how we earn the demo. The tracking layer is why teams pay.”

Why now · 30 sec

Document AI actually works now. The same tech that reads medical forms can read plan review redlines. Two years ago this was impossible. Today it's a weekend.

Solo-built, priced where firms can afford it. Enterprise players raised \$54M chasing general contractors. I'm going straight to the firms they ignore.

Built in NC with real customer proximity. I can walk into a firm in Greensboro and sit with the person who's retyping that PDF. That feedback loop is the edge.

The ask · 30 sec

I'm looking for three things at Startup Week:

- Architects, civil engineers, or developers who deal with redline PDFs — I want this tool in your hands this week.
- Operators who've seen the coordination pain and want to advise.
- Other founders building in AEC or proptech who want to compare notes.

Close · 15 sec

“Permit chaos eats developer margins, architect hours, and engineer weekends. EntitleFlow cuts the ugliest part of that cycle in under two minutes. Thank you.”

The 60-second version

For elevators, hallways, and the interrupted pitch.

"I'm Jene, I'm building EntitleFlow. It turns reviewer redline PDFs into a structured comment list in under two minutes — then tracks the response until the resubmittal ships. Today, architecture firms are paying permit coordinators \$50K a year to solve this problem manually. We do it in a browser tab for \$299 a month. We're starting with NC firms because I live here, but the product works everywhere. Want to see the 90-second demo?"

Networking 1:1 script

Opening line — pick based on who you're with

Architect or engineer: "Quick question — when your team gets a redline PDF back from the city, how do you track the comments internally?"

Developer, GC, or owner's rep: "How much of your schedule risk right now is sitting in permit resubmittal cycles?"

Founder or operator: "I'm building something in AEC — permit comment tracking for architecture firms. Have you run into this space?"

Three qualifier questions

- "How many active permit projects are you running right now?"
- "Who on your team is responsible for tracking reviewer comments after submission?"
- "If I could turn a reviewer redline PDF into a structured comment list in 90 seconds, would that save your team real time?"

The 20-second demo offer

"I've got it on my phone. Want me to show you right now? It takes 90 seconds and you can upload your own PDF."

The close

"Here's my card — QR code takes you to the tool. If it's useful, I'd love 15 minutes this week to hear what's on your plate."

**What you get at
entitleflow.com/try**

- Upload your own redline PDF
- Get a structured comment list in under 2 minutes
- See exactly how EntitleFlow works

\$299/mo per firm
Unlimited everything. First month of onboarding free.

The landing page behind the QR · /try

Hero: Drop a reviewer redline PDF. Get a structured comment list in under 2 minutes.

Below hero: Upload widget. Drag-drop or click to select.

After upload: Processing animation → structured comment list rendered on screen → email capture ('Want to share this list with your team? Drop your email.').

Below the fold: 3 sample PDFs to try. One-paragraph explainer of what EntitleFlow does after the parse. One CTA: 'Book a 15-minute walkthrough.'

Frequently asked questions

“How is this different from Bluebeam?”

Bluebeam is great for markup — that's where reviewer comments start. But once those markups come back to the architect's team, Bluebeam doesn't help you assign owners, track response status, or compile the resubmittal. That's what we do. Think of us as 'after Bluebeam' — the coordination layer between markup and resubmission.

“How is this different from PermitFlow?”

PermitFlow raised \$54M to help big general contractors submit permits. They're going after multi-state enterprise. We're going after the architect or engineer who has to respond to the reviewer comments after submission. Different buyer, different wedge. Their users wish they had our product.

“Why should I trust a solo founder?”

Because solo means my product is priced where you can actually afford it, I can onboard you personally in the first month, and every decision in the product came from a real conversation, not a product-committee compromise. When this scales, price goes up. Right now, I'm cheap and hungry.

“Is this just for North Carolina firms?”

I'm building and testing in NC first because I live here and I can meet my first 20 customers in person. The product works for any AEC firm in the US that gets reviewer redline PDFs back from a municipality. Not a geography play — a GTM play.

“What's the pricing?”

\$299 a month per firm. Unlimited projects, unlimited seats. First month includes personal onboarding from me. If you're a 2-person firm, that's fair. If you're a 25-person firm, that's a steal.

“Where does the AI come in?”

Google Cloud Document AI reads the PDF. Vertex AI — Gemini — classifies the comments, flags recurring reviewer patterns, and eventually will draft response letters. Real AI doing real work, not a wrapper around ChatGPT.

“What if the PDF is garbage?”

We handle scanned PDFs, native PDFs, Bluebeam markups, and hand-scribbled reviewer notes. If we can't parse something cleanly, the tool tells you exactly where it got stuck so you can fix that one comment manually — instead of retyping all 25.

“What's your ask?”

Three pilot firms by May 15. Each pilot runs one active permit cycle through EntitleFlow. I want feedback, case studies, and logos. Pricing is free for the pilot period.

Market size

- AIA reports ~115,000 architecture firms in the US.
- Average small-to-mid firm manages 5–15 active permit projects.
- Permit coordination jobs in NC alone: hundreds of live postings at \$25–\$40/hr.
- 1% of AIA firms at \$299/mo = \$4M ARR. Achievable in 18 months with a solo founder plus one support hire.

Defensibility

- Document AI training data improves with every parse — a moat that grows.
- Jurisdiction intelligence (Greensboro vs. Raleigh reviewer patterns) becomes content marketing and lead magnet, not a product pillar.
- Solo builder plus GCP credits means runway for 24+ months without dilution.

Current status (honest version)

- Product is live at entitleflow.com with full portal.
- Core redline parse is functional end-to-end.
- First paying customer target: May 2026.
- Bootstrapped, no outside capital. Looking for pilot customers, not investors, right now.

TARGET OUTCOMES · STARTUP WEEK

How to know if the week worked

Min	Good	Great
10 EMAILS · 3 CONVOS · 1 PILOT	25 EMAILS · 5 CONVOS · 2 PILOTS	50 EMAILS · 10 CONVOS · 3+ PILOTS

What you're **not** measuring: applause, compliments, “we love what you're doing.” Those are vanity. Pilots and emails are signal.

Do's and don'ts

DO

- Lead with the concrete 2-minute parse time.
- Show the tool on your phone if anyone asks.
- Ask about their current workflow before pitching.
- Collect email, company, role on every useful convo.
- Take notes on objections — they become next week's product priorities.

DON'T

- Don't start with the AI — start with the pain.
- Don't mention the full roadmap — you're selling one wedge.
- Don't pitch investors unless they ask — you're selling pilots.
- Don't get lost in the NC-first story — it's a beachhead, not a fence.
- Don't apologize for anything. The product is real.

Prepared 2026-04-23 as part of the EntitleFlow simplification pass. Paired with the *SIMPLIFICATION_SPEC.md* handoff doc for the site amputation work going into Greensboro Startup Week.
